

Week 5 - Grading Rubric			
	Criteria	Ratings	Pts
	Revenue Model and Unit Economics Multiple models were considered and eliminated with evidence from interviews or competitive research. The selected model explains how money changes hands. Unit economics include all realistic costs, not just direct costs. Every number is marked as data or an assumption.		30 pts
	Financial Model Three scenarios with revenue, costs, and net. Scenarios differ by assumptions, not just volume. Full cost structure, including founder time. If all scenarios result in losses, a breakeven analysis should be included.		30 pts
	Pricing Test Plan Clear hypothesis with customer, price, and evidence. Step-by-step plan with specific people, dates, and actions. Success and failure criteria are concrete. Plan B exists.		30 pts
	Claude Code Session Log Session exported from Claude Code with 10+ exchanges. The student corrected or pushed back on the AI output at least twice. Session shows the revenue model evolving through iteration, not just final outputs.		10 pts
Total Points: 100
