

# AI Styling Feedback Platform

Customer Discovery — Round 2 Interview Guide

BUS 395: Venture Creation with AI | Jane Dias | June 2026

Mom Test reminders: Ask about past behavior, not hypotheticals. No leading questions. Don't mention the product until the concept card. Write down exact words, not summaries.

## WARM-UP — Confirm the problem exists before going further

These are new interviewees. If she has no answer to A, she's not your customer — wrap up early.

### A. Shopping uncertainty

"Walk me through the last time you were in a fitting room or standing in front of a mirror and genuinely weren't sure whether something looked right on you. What did you do?"

### B. Confidence baseline

"After you get dressed, how often do you feel genuinely confident in what you picked — most of the time, sometimes, or rarely?"

### C. Who they turn to

"The last time you weren't sure about an outfit — who, if anyone, did you reach out to?"

## USAGE FREQUENCY — How often does this problem actually happen?

### 1. Photo behavior

"Think back over the last two or three weeks. How many times did you take a photo of yourself in an outfit — in a fitting room, at home, anywhere?"

### 2. High-stakes decision moment

"Walk me through the last time you had to decide what to wear for something that actually mattered. What was it, what did you do, how long did it take?"

## WASTED SPEND — Anchor the value without mentioning a price

Get a specific dollar amount. This is the comparison point for \$9/month — let them do the math themselves.

### 3. Online purchase regret

"Walk me through the last time you bought something online that you ended up not wearing. At what point did you have doubts about it?"

### 4. Unworn item in closet

"Pick one specific item in your closet right now that you bought and don't wear. What is it, where did it come from, what did you pay?"

## COMPETING WORKAROUNDS — Do they already have a system that works?

If she says yes and it works — she's Danaï. Not your customer right now. Note it and move on.

### 5. Current solution

"What do you do right now when you need an honest opinion on an outfit and there's nobody around? Does that actually work for you?"

#### **FEEDBACK TRUST — What makes feedback credible? (Primes AI trust before the reveal)**

##### **6. Last negative feedback**

"Tell me about the last time someone told you something didn't look good on you. Who said it, what did they say, and what did you actually do?"

##### **7. Trust criteria**

"When you get feedback on an outfit from someone you trust — what is it about them that makes you trust it? Is it their taste, that they know your body, something else?"

##### **8. Disagreement with feedback**

"Has someone ever told you an outfit was bad and you thought they were wrong? What happened?"

#### **CONCEPT REVEAL — Read this aloud, verbatim**

"I want to describe something I'm working on for class — just a concept, not something I'm selling. Imagine you take a photo of yourself in an outfit — fitting room, mirror at home, before you go out — and within seconds you get specific feedback on whether it works for your body. Not just yes or no — it tells you what isn't working and why, what you could do differently to style it, or what to look for instead. The more you use it, the more it learns your proportions and what works on you specifically, so the feedback gets more personal over time. The first 8 sessions are free. After that it's a monthly subscription to keep your profile."

Stop talking. Let her react. Write down exactly what she says first — that's your most honest signal.

If she goes quiet, say: "What's your gut reaction?" If she asks a question back, say: "What makes you wonder about that?" Don't defend anything.

#### **VAN WESTENDORP PRICING — Ask all four before mentioning \$9**

##### **10. Too cheap**

"At what price would this feel so cheap you'd question whether it actually works?"

##### **11. Good deal**

"At what price would this feel like a genuinely good deal?"

##### **12. Getting expensive**

"At what price would it start to feel expensive, but you'd still consider it?"

##### **13. Too expensive**

"At what price would it be too expensive, no matter what?"

**Only after all four answers: "After 8 free sessions where it's learned your proportions and what works on you, would you pay \$9 to keep that profile?"**

Write their exact words on this last question. "Sure" and "Yes, definitely" are different data points.

#### **SESSION THRESHOLD + CHURN — When do they pay, and when do they quit?**

#### 14. Conversion moment

"Think about an app you kept paying for after a free trial. How many times had you used it before you decided it was worth paying for? What made you decide?"

#### 15. Cancellation behavior

"Think about the last subscription you cancelled. How long did you wait, and what finally pushed you to stop?"

### CLOSE

"That's everything — this was really helpful. Is there anything about clothing decisions or getting dressed that you wish I had asked about?"

Thank them. Note: date, name, age range, whether they're a target customer (yes/no/maybe).

#### AFTER EACH INTERVIEW — fill in before your next one
